

## 2022 Uniform Reporting Summary Output Tables Executive Summary

State Mental Health Agencies (SMHAs) compile and report annual data as part of their application package for SAMHSA's Community Mental Health Block Grant. These compiled data constitute the Uniform Reporting System (URS).

The URS is comprised of 21 tables that are developed by SAMHSA in consultation with SMHAs. The 2022 URS Output Tables present findings from 59 states and U.S. territories. Each output table provides summary information on the SMHA clients served in 2022: sociodemographic characteristics of clients served, outcomes of care, use of selected evidence-based practices, client assessment of care, insurance status, living situation, employment status, and readmission to state psychiatric hospitals within 30 and 180 days. Key data highlights are listed below:

- In 2022, 8,180,236 clients received SMHA services from 59 states and U.S. territories. This is a decrease from 8,195,517 SMHA clients in 2021. There were 5,965,872 adults (or 23.1 per 1,000), 2,197,002 children (or 29.9 per 1,000) served. About 17,362 (0.2 percent) clients were missing age data.
- Among SMHA clients, there were 4,394,191 (53.7 percent) females served while there were 3,730,939 (45.6 percent) males served. In 27 states and U.S. territories, more SMHA males were served than females, while in 32 states and U.S. territories, more SMHA females were served.
- The age distribution among SMHA clients was the largest among ages 25-44 with 33.0 percent, followed by ages 45-64 with 22.8 percent, children ages 0-12 with 14.2 percent, and children ages 13-17 with 12.7 percent.
- The highest percentage of SMHA clients that were served was among the White population with 57.9 percent, followed by Black or African Americans with 17.4 percent. SMHA clients served were 15.8 percent Hispanic and 74.5 percent non-Hispanic.

## West Virginia 2022 Mental Health National Outcome Measures (NOMS): SAMHSA Uniform Reporting System

Utilization Rates/Number of Consumers Served	U.S.	State	U.S. Rate	States
Penetration Rate per 1,000 population	8,180,236	18.04	24.37	59
Community Utilization per 1,000 population	7,900,059	16.98	23.53	59
State Hospital Utilization per 1,000 population	108,725	0.79	0.33	53
Other Psychiatric Inpatient Utilization per 1,000 population	433,997	0.60	1.53	42

**Note:**

**Are Client Counts Unduplicated?** Unduplicated **Number of States with Unduplicated Counts** 43

This table uses data from URS Table 2a, Table 2b and from the U.S. Census Bureau. All denominators for penetration rates use the U.S. Census data from 2021.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served.

The penetration rates for 'Other' gender as well as Age, Gender, Race and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

**State Notes:**

**Table 2a**

Age Age calculated as of January 1, 2022.  
Gender West Virginia does not collect the "Other" category for gender.  
Race West Virginia has a 'Race Other' option that is not covered on this form. 'Race Other' has been added to 'Race Not Available.'  
Overall None

**Table 2b**

Age Age calculated as of January 1, 2022.  
Gender West Virginia does not collect the "Other" category for gender.  
Race West Virginia has a 'Race Other' option that is not covered on this form. 'Race Other' has been added to 'Race Not Available.'  
Overall None

# ACCESS DOMAIN: Persons Served in Community Mental Health Programs by Age and Gender, FY 2022

West Virginia

Reporting Period: 7/1/2021 To: 6/30/2022

Demographic	Served in Community Mental Health Programs				Penetration Rates (rate per 1,000 population)		States Reporting

Total	30,262	100.0%	7,900,059	100.0%	17.0	23.5	59

## Note:

U.S. totals are based on states reporting.

This table uses data from URS Table 3 and from the U.S. Census Bureau. All denominators for penetration rates use the U.S. Census data from 2021.

U.S. penetration rates are calculated uniquely for each data element based on only those states who reported numerator (clients served) data.

## State Notes:

Age Age calculated as of January 1, 2022.

Gender West Virginia does not collect the "Other" category for gender.

Overall During the course of an inpatient stay an individual may be transferred to another facility. The facility where the initial admission occurred is used to determine the service setting.

## Note:

This table uses data from URS Table 14a, Table 14b and from the U.S. Census Bureau. All denominators use the U.S. Census data from 2021.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served.

The penetration rates for 'Other' gender as well as Age, Gender, Race and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

## State Notes:

When is Employment Status Measured?	At Admission	At Discharge	Monthly	Quarterly	Other
WV	Yes	Yes	-	-	-
US	35	19	3	8	19

## Note:

\*In Labor Force is the sum of consumers employed and unemployed.

\*\*With Known Employment Status is the sum of consumers employed, unemployed and not in labor force.

Consumers employed as a % of those in labor force uses adults employed and unemployed as the denominator.

Consumers employed as a % of known employment status uses the sum of persons employed, unemployed and not in labor force as the denominator.

This table uses data from URS Table 4.

## State Notes:

Age Age calculated as of January 1, 2022.

Gender West Virginia does not collect the "Other" category for gender.

Overall The sum of the values in a column may be greater than the total of the column due to change in employment status during the year.

**OUTCOMES DOMAIN: Employment Status of Adult Mental Health Consumers Served in the Community by Diagnosis, FY 2022**

**West Virginia**

**Reporting Period: 7/1/2021 To: 6/30/2022**

## West Virginia

URS Table Number	General Notes
3	From 2020 to 2022 there have been several factors that impact State Psychiatric Hospitals that affect the comparison of total numbers served in State Psychiatric Hospitals. COVID changed some practices at the hospitals which had an impact on the 2021 data, so as processes and procedures return the data will also be changing. Between 2017 and 2020, 159 community beds were lost. Due to COVID we probably never saw the true impact of that loss until now. We saw avoidance of residential placements during the pandemic to prevent spread and outbreaks. Additionally, the State is experiencing increased methamphetamine use, which could lead to greater admissions due to associated psychosis. Furthermore, the stresses associated with the pandemic could have led to more need in the state too. Basically, between changes in the system because of COVID and independent of COVID, as well the impact of additional mental health stressors over the past two to three years, it is hard to identify specific causes of this increase.
4	Employment status is not required to be reported for non-Medicaid or non-Charity Care individuals. The reporting of this variable is not validated for Medicaid or Charity care individuals.
6	It is expected that any changes in overall numbers will also be seen at a point in time assessment. The same reasons for differences cited in comment 5 for Table 3 will also be applicable to this measure (Total Number Served).
6	The same reasons for differences cited in comment 1 for Table 3 will also be applicable to this measure (Admissions).
6	This is likely due to the decrease in community beds for a full reporting period. Additionally, the State has substantial workforce challenges, which are contributing to the ability of community partners to provide services. The State Hospitals take on extraordinary effort and expense to ensure beds remain available. Not all community partners will be able to do this (Total admissions to other Psychiatric Inpatient).
6	Average LOS of children increased- this increase is an artifact of how ages are calculated in the hospital system. If someone turns 18 during the reporting period, the system calculates their birthday as a set date, incorrectly identifying them as children in the hospital if their birthday is after that date.
6	Avg LOS of adults decreased. This is likely due to changes in practices associated with COVID as well as individuals that would have been served by a community bed now being served by a State Hospital bed. The pandemic provided a reset or re-evaluation of who needs to be in residential placements. Basically, a more conservative approach of keeping a person in residential care came with additional risk during the pandemic. That introduction of risk in decision making changed some behaviors. Some have returned closer to pre-pandemic practices/approaches while others have settled into a new normal of somewhere in between of pre- and post-COVID practices. Additionally, the State Hospitals typically get the most severe cases. With the closing of community beds, some of the less severe clients will be served by the State Hospitals leading to decreases in LOS based on changes to the severity of illness clients present with at the hospital.
7, 7A	The difference is the COVID-19 Relief reported separately on Table 7 but a separate column did not exist on Table 7A for it to be reported. The COVID-19 Relief funds have been reported on Table 7A under Other Federal Funds.
8	Expenditures for 2022 were tracked with function codes to better identify community outreach, advocacy and needs assessment activities by the bureau so they could be reported properly. This change resulted in large percentage changes in several categories from previous year.
12	The programs that serve children have more providers that are not comprehensive community behavior health centers, which makes up the bulk of the state's community reporting. However, specialized substance use services are often found at comprehensive centers. The comorbidity likely results in increased chances of being seen at a comprehensive instead of a different community provider. West Virginia continues to experience a drug crisis with particular concerns around vaping of illicit and unknown substances. The percent increase is also influenced by relatively small numbers but this measure needs to be monitored to identify if we are seeing the drug crisis starting to show up in youth using substances.
14A	Changes in American Indian/Alaska Native, Asian, and Native Hawaiian/Other Pacific Islander consumers with SMI/SED are small changes in numbers, but categories are historically so, so any change is seen as a large percentage shift.

URS Table Number	General Notes
14A	Change in multi-racial consumers - this is likely influenced by multiple factors. While the State is still primarily White, the racial makeup of the state is becoming more diverse with each year. Additionally, with each year comes data system and collection updates that allows a more nuanced view of race to be captured.
15	Increase in consumers in Jail/Correctional Facility - this is likely a combination of lower numbers, a net change of 28 people, and our SOR program has been that working on developing programs in jails, which could result in clients receiving services after release.
20A	The change in total forensic percent readmitted within 30 days is likely due to a change in the way the system allowed movement between facilities. There was an increase in movement of patients to diversion facilities and these show as a discharge and readmission in the system. Additionally, in late 2020, one state psychiatric hospital, which had previously lost its accreditation, regained its certification and some forensic patients were able to move to diversion hospitals allowing for more capacity for civil commitments.
21	The change in non-forensic percent readmitted within 30 days and 180 days shows a decrease in raw totals, but an increase in rates. A percentage of the 30 day readmissions could be attributed to moving between facilities such as to a diversion facility. Additionally, there was a change in state law regarding forensic patients that has impacted the civil commitment readmissions. We are examining the hospital data system to better reflect this movement.

## **Errata Sheet to the 2022 URS Output Tables**

This page includes clarifications and corrections to the 2022 URS Output Tables.

### **ACCESS DOMAIN: Adults with SMI and Children with SED Receiving Crisis Response Services, FY 2022**

The table counts and percentages have been updated due to a processing error.

### **OUTCOMES DOMAIN: Consumer Survey Results, FY 2022**

The percentages have been updated in Response Rate for “Children: U.S.” and “Adults: U.S. Average” due to a processing error.
