

2022 Uniform Reporting Summary Output Tables Executive Summary

State Mental Health Agencies (SMHAs) compile and report annual data as part of their application package for SAMHSA's Community Mental Health Block Grant. These compiled data constitute the Uniform Reporting System (URS).

The URS is comprised of 21 tables that are developed by SAMHSA in consultation with SMHAs. The 2022 URS Output Tables present findings from 59 states and U.S. territories. Each output table provides summary information on the SMHA clients served in 2022: sociodemographic characteristics of clients served, outcomes of care, use of selected evidence-based practices, client assessment of care, insurance status, living situation, employment status, and readmission to state psychiatric hospitals within 30 and 180 days. Key data highlights are listed below:

- In 2022, 8,180,236 clients received SMHA services from 59 states and U.S. territories. This is a decrease from 8,195,517 SMHA clients in 2021. There were 5,965,872 adults (or 23.1 per 1,000), 2,197,002 children (or 29.9 per 1,000) served. About 17,362 (0.2 percent) clients were missing age data.
- Among SMHA clients, there were 4,394,191 (53.7 percent) females served while there were 3,730,939 (45.6 percent) males served. In 27 states and U.S. territories, more SMHA males were served than females, while in 32 states and U.S. territories, more SMHA females were served.
- The age distribution among SMHA clients was the largest among ages 25-44 with 33.0 percent, followed by ages 45-64 with 22.8 percent, children ages 0-12 with 14.2 percent, and children ages 13-17 with 12.7 percent.
- The highest percentage of SMHA clients that were served was among the White population with 57.9 percent, followed by Black or African Americans with 17.4 percent. SMHA clients served were 15.8 percent Hispanic and 74.5 percent non-Hispanic.

Florida 2022 Mental Health National Outcome Measures (NOMS): SAMHSA Uniform Reporting System

Utilization Rates/Number of Consumers Served	U.S.	State	U.S. Rate	States

Unduplicated

This table uses data from URS Table 2a, Table 2b and from the U.S. Census Bureau. All denominators for penetration rates use the U.S. Census data from 2021.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served.

The penetration rates for 'Other' gender as well as Age, Gender, Race and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

Note:

This table uses data from URS Table 14a, Table 14b and from the U.S. Census Bureau. All denominators use the U.S. Census data from 2021.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served.

The penetration rates for 'Other' gender as well as Age, Gender, Race and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

General Notes FY 2022

Florida

URS Table Number	General Notes
2a	The decrease in the total number of consumers served in Community MH Programs has to do with consolidation and deduplication of dataset Versions 13 and 14 (V13 and V14). At the time (FY2021) when V14 was created, in order to resolve issues with submissions being rejected, managing entities were asked to delete and resubmit records for the fiscal year. When they did so, they included a number of duplicate episodes. Once that was completed, FEI created a consolidated database by reconciling V13 and V14 into one common set of data. This process involved deduplicating records. This decrease likely reflects both a small decrease in total clients seen, as well as the effect of removing duplication.
3	Table 3 reflects an overall decrease in clients seen in multiple tables this fiscal year. The level of decrease (approximately 20%) was consistent across other tables, for example Tables 2A and 2B. This was the effect of consolidation and deduplication of V13 and V14. At the time (FY21) when V14 was created, in order to resolve issues with submissions being rejected, managing entities were asked to delete and resubmit records for the fiscal year. When they did so, they included a number of duplicate episodes. Once that was completed, FEI created a consolidated database by reconciling Versions 13 and 14 into one common set of data. This process involved deduplicating records. This decrease likely reflects both a small decrease in total clients seen as well as the effect of removing duplication.
5a	The decrease in the total number of consumers by funding status and non-Medicaid funding only has to do with consolidation and deduplication of V13 and V14. At the time (FY21) when V14 was created, in order to resolve issues with submissions being rejected, managing entities were asked to delete and resubmit records for the fiscal year. When they did so, they included a number of duplicate episodes. Once that was completed, FEI created a consolidated database by reconciling Versions 13 and 14 into one common set of data. This process involved deduplicating records. This decrease likely reflects both a small decrease in total clients seen, as well as the effect of removing duplication.
6	The providers appear to have shifted for inpatient services from using Residential to Other Psychiatric Inpatient.
6	The increase in the total admissions to state hospital during the year is accounted for by the small n. It reflects concerted attempts to reduce the wait list for state hospitals undertaken post COVID.
6	The decrease in the total number of consumers served in Community Programs at the beginning of the year has to do with consolidation and deduplication of V13 and V14. At the time (FY21) when version 14 was created, in order to resolve issues with submissions being rejected, managing entities were asked to delete and resubmit records for the fiscal year. When they did so, they included a number of duplicate episodes. Once that was completed, FEI created a consolidated database by reconciling Versions 13 and 14 into one common set of data. This process involved deduplicating records. This decrease likely reflects both a small decrease in total clients seen, as well as the effect of removing duplication.
6	The decrease in total number of consumers served in Residential Treatment Centers at the beginning of the year is due to the fact that the providers appear to have shifted for inpatient services from using residential to other psychiatric inpatient.
7	The increase in total administration expenditures is explained in the column for MHBG on 7a and adjusted the amounts to reflect the COVID-19 supplemental dollars in addition to the regular block grant. \$1,916,132 is non-recurring funding from a previous CMHBG increase that was budgeted in 21-22.
14a	The decrease in the total number of consumers with SMI/SED has to do with consolidation and deduplication of V13 and V14. At the time (FY21) when version 14 was created, in order to resolve issues with submissions being rejected, managing entities were asked to delete and resubmit records for the fiscal year. When they did so, they included a number of duplicate episodes. Once that was completed, FEI created a consolidated database by reconciling Versions 13 and 14 into one common set of data. This process involved deduplicating records. This decrease likely reflects both a small decrease in total clients seen, as well as the effect of removing duplication.
16	The decrease in the total number of adults with SMI has to do with consolidation and deduplication of V13 and V14. At the time (FY21) when V14 was created, in order to resolve issues with submissions being rejected, managing entities were asked to delete and resubmit records for the fiscal year. When they did so, they included a number of duplicate episodes. Once that was completed, FEI created a consolidated database by reconciling Versions 13 and 14 into one common set of data. This process involved deduplicating records. This decrease likely reflects both a small decrease in total clients seen, as well as the effect of removing duplication.
16	Small n is relative to the total number of clients. This is likely within normal year to year variations.

URS Table Number	General Notes
16	The decrease in the total number of children with SED has to do with consolidation and deduplication of V13 and V14. At the time (FY21) when V14 was created, in order to resolve issues with submissions being rejected, managing entities were asked to delete and resubmit records for the fiscal year. When they did so, they included a number of duplicate episodes. Once that was completed, FEI created a consolidated database by reconciling Versions 13 and 14 into one common set of data. This process involved deduplicating records. This decrease likely reflects both a small decrease in total clients seen, as well as the effect of removing duplication.
16	The delta of -16% reflects the decrease in clients seen as a result of the consolidation and deduplication seen in the above response.
16b	We do not collect clients for call centers by adult and child, just a total. The total number for FY21/22 is 21,803.
17	Providers informed us their data systems had changed to not allow overlapping admissions. This creates a problem with co-occurring, in that the provider database will not accept that, so they are underreporting to us.
17	We contracted with FAADA to provide MAT services for the SOR grant clients. FAADA does not use our system and that decreased the number of Medication Management services reported to us by our providers.
20a	The actual change from FY21 would be 2%, which would be within normal year to year variability.

Errata Sheet to the 2022 URS Output Tables

This page includes clarifications and corrections to the 2022 URS Output Tables.

ACCESS DOMAIN: Adults with SMI and Children with SED Receiving Crisis Response Services, FY 2022

The table counts and percentages have been updated due to a processing error.

OUTCOMES DOMAIN: Consumer Survey Results, FY 2022

The percentages have been updated in Response Rate for “Children: U.S.” and “Adults: U.S. Average” due to a processing error.
