

## 2022 Uniform Reporting Summary Output Tables Executive Summary

State Mental Health Agencies (SMHAs) compile and report annual data as part of their application package for SAMHSA's Community Mental Health Block Grant. These compiled data constitute the Uniform Reporting System (URS).

The URS is comprised of 21 tables that are developed by SAMHSA in consultation with SMHAs. The 2022 URS Output Tables present findings from 59 states and U.S. territories. Each output table provides summary information on the SMHA clients served in 2022: sociodemographic characteristics of clients served, outcomes of care, use of selected evidence-based practices, client assessment of care, insurance status, living situation, employment status, and readmission to state psychiatric hospitals within 30 and 180 days. Key data highlights are listed below:

- In 2022, 8,180,236 clients received SMHA services from 59 states and U.S. territories. This is a decrease from 8,195,517 SMHA clients in 2021. There were 5,965,872 adults (or 23.1 per 1,000), 2,197,002 children (or 29.9 per 1,000) served. About 17,362 (0.2 percent) clients were missing age data.
- Among SMHA clients, there were 4,394,191 (53.7 percent) females served while there were 3,730,939 (45.6 percent) males served. In 27 states and U.S. territories, more SMHA males were served than females, while in 32 states and U.S. territories, more SMHA females were served.
- The age distribution among SMHA clients was the largest among ages 25-44 with 33.0 percent, followed by ages 45-64 with 22.8 percent, children ages 0-12 with 14.2 percent, and children ages 13-17 with 12.7 percent.
- The highest percentage of SMHA clients that were served was among the White population with 57.9 percent, followed by Black or African Americans with 17.4 percent. SMHA clients served were 15.8 percent Hispanic and 74.5 percent non-Hispanic.

# Kansas 2022 Mental Health National Outcome Measures (NOMS): SAMHSA Uniform Reporting System

Utilization Rates/Number of Consumers Served	U.S.	State	U.S. Rate	States
Penetration Rate per 1,000 population	8,180,236	19.57	24.37	59
Community Utilization per 1,000 population	7,900,059	19.57	23.53	59
State Hospital Utilization per 1,000 population	108,725	0.88	0.33	53

**Number of States with Unduplicated Counts** 43

This table uses data from URS Table 2a, Table 2b and from the U.S. Census Bureau. All denominators for penetration rates use the U.S. Census data from 2021.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served.

The penetration rates for 'Other' gender as well as Age, Gender, Race and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

## Note:

This table uses data from URS Table 14a, Table 14b, and from the U.S. Census Bureau. All denominators use the U.S. Census data from 2021.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served.

The penetration rates for 'Other' gender as well as Age, Gender, Race and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

## Kansas

URS Table Number	General Notes
2A	Client counts are calculated using Kansas's AIMS database, which consists of client records collected from all CMHCs (Community Mental Health Centers) in Kansas. Each CMHC uses a unique identifier for each client, which is used to provide unduplicated counts from each CMHC. However, there is currently no method available to unduplicate clients that received services from multiple CMHCs.
3	The data provided within Table 3 includes the patients served through our Psychiatric Services Program, State Services Program, and Sexual Predator Treatment Program combined.
3	Per LSH - The total for State Psychiatric Hospitals in Table 3 is three lower than the sum of total served at the beginning of the year and admissions during the year from Table 6 as counts done on the first day of the year for Table 6 included three new admits who were counted for both fields.
4	Employment status is a required data collection field for all actively enrolled Kansas adult mental health consumers at admission. Monthly updates to employment status are collected for adults with SPMI while the adult is receiving specialized services. Data may be reported for clients who are not enrolled, but it is not required. As such, client counts may include a large proportion of unavailable information. Records were only included for those admitted or otherwise updated during the period.
6	The data provided within Table 6 includes the patients served through our Psychiatric Services Program, State Services Program, and Sexual Predator Treatment Program combined. It should be noted that the Sexual Predator Treatment Program is a long-term program that entails very limited discharges that occur based on the structure of advancement for these individuals.
6	COVID-19 impacted the number of beds and how many individuals can occupy a room within the State Hospitals. The increase in the average length of stay of adults discharged from State Hospitals can be attributed to state hospital beds opening up and the increase in the number of individuals occupying a room.
6	Per LSH - The total for State Psychiatric Hospitals in Table 3 is three lower than the sum of total served at the beginning of the year and admissions during the year from Table 6, as counts done on the first day of the year for Table 6 included three new admits who were counted for both fields.
7	The increase in Total MHBG expenditures was caused by adding MH suicide prevention vendors, FEP additional expenses to meet federal requirements, as well as CRO payments that were not included on the 2021 report, in addition to additional funding.
7	The decrease in Total Other Federal Funds expenditures is the result of SFY 2022 having no Systems of Care Federal expenditures. Assisted out treatment expenditures were billed substantially less.
7	The decrease in Total Primary prevention expenditures is due to decreased payments on Path state Match and reclassification of some other PATH expenditures as well as reduced AOT and SOC expenditures.
7	The increase in ESMI(FEP) expenditures was caused by the state adding another vendor to the agreements and increasing funding to meet the 10% requirement on Federal year expenses.
7	The increase in State Hospital expenditures: As noted in the 7b response, Medicaid share of hospital expenses was underreported in FY21. Total expenses for State Hospitals should have been reported as \$110,796,316 in FY21. With this correction, the variance would result in an increase of approximately 15% between the two years. This increase can be attributed to a significant increase due to agency staffing costs escalating significantly in FY22 at the State Mental Health Hospitals.
7	The increase in Total Other 24-Hour Care is due to changes in Medicaid and state items listed as other 24 hour care such as SED expenditures.
7	The change in Total Ambulatory expenditures was caused by changes in Medicaid and PRTF decreases.
7	The increase in Total Administrative expenditures was due to notable increase in staffing during SFY 2022 compared to the previous year. Travel expenses also increased due to the lifting of COVID restrictions
7A	The increase in spending on total CSC-Evidence-Based Practices for First Episode Psychosis Expenditures from \$419,405 in 2021 to \$594,501 in 2022 (21% increase) was caused by the state including another vendor to the agreements and increasing the funding to meet the 10% increase requirement on Federal year expenses.
7b	Increase in Total Medicaid expenditures: In researching this variance, the State identified that Medicaid expenses reported in both FY21 and FY22 were not calculated appropriately. The total for Medicaid in FY21 should have been \$240,732,024 and \$251,548,840 for FY22, resulting in an 4% increase. This 4% increase can be attributed to the increased cost of State Hospital due to agency staffing costs escalating in FY22 as well as the State's implementation of Certified Community Behavioral Health Clinics (CCBHC) in the later part of FY22.

URS Table Number	General Notes
9, 11	2021 was the first year Kansas used the ECHO survey to report NOMs data. Domains scores were calculated from one or more ECHO survey questions using a modification of the method used to calculate domains scores for the MHSIP survey. Responses to questions comprising a domain were assigned 1 to 5 points on a Likert scale. Each respondent who answered a domain-specific number of questions was in the domain's denominator. If the average number of points for the questions in the domain was less than 2.5, then the respondent was in the domain's numerator.
11	The increase in percent of adults reporting positively about outcomes is the change in collecting outcome measures. The change in collecting outcome measures is due to incorporating email addresses, increasing the amount of time adults can send in their surveys, translating the survey into Spanish to reach a larger pool of opinions, and increasing the number of times adults are contacted as a reminder to fill out the survey. All these items have increased the percent of adults filling out the survey which has resulted in the increase in positive outcomes
14A	COVID-19 has significantly impacted the number of consumers accessing services within Kansas. The Asian community has been a community that struggles with access to services due to stigma around mental health and language access. COVID-19 impacted the ability for programs to do community outreach at the extent at which they did before COVID-19. Also, COVID-19 impacted many communities' ability to access services.
15	Living situation is collected for all actively enrolled Kansas mental health consumers at admission. Monthly updates to living situation are collected only for adults with SPMI and children with SED while they are receiving specialized services. Data may be reported for clients who are not enrolled, but it is not required. As such client counts may include a large proportion of unavailable information. Records were only included for those admitted or otherwise updated during the period.
15A	For our SSP, PSP, and SPTP programs, our numbers entered within Table 15A would reflect admissions for all 3 programs as they all would have individuals that meet SMI criteria based on diagnosis and reasons for referrals. This does not include same patients re-admissions (multiple admissions of same patient during this reporting period) to avoid potential duplication.  Included: F20-F29 Schizophrenia, schizotypal, delusional, and other non-mood psychotic disorders F30-F39 Mood [affective] disorders F40-F48 Anxiety, dissociative, stress-related, somatoform and other nonpsychotic mental disorders F50-F59 Behavioral syndromes associated with physiological disturbances and physical factors F60-F69 Disorders of adult personality and behavior F90-F98 Behavioral and emotional disorders with onset usually occurring in childhood and adolescence
16	The data discrepancy in Table 16 is the result of 1) individuals who age out of Kansas Foster Care may qualify for KanCare/Medicaid through age 26 and 2) at age 18 those foster care youth will transition from a SED classification to a SMI classification, therefore it is possible for a record of a 19 year old receiving Therapeutic Foster Care to fail to show up on the SED list due to age. The data set provided shows one such beneficiary.
16	Difference between SED population served and SED beneficiaries receiving Therapeutic Foster Care services: Beneficiaries up to age 20 are eligible for Therapeutic Foster Care services, but they are classified as SMI rather than SED at age 19. The decrease in the total number of consumers receiving Supported Employment services is due to the decrease in workforce within Kansas during 2021 to 2022. COVID 19 has had a significant impact on workforce within Kansas and the ability to retain workers within the Community Mental Health Centers. Kansas is currently going through the process of implementing the Certified Community Behavioral Health Clinics model which requires Supported Employment services as part of that model.
16	Kansas did not conduct any official fidelity reviews during the report period, but will be resuming fidelity reviews in 2022-2023 for IPS Supported Employment and Housing First Programs. Kansas continues to work directly with the IPS Employment Center for Supported Employment for program implementation, technical support, and on developing/enhancing the IPS Supported Employment Fidelity Measures for persons in rural and frontier settings. Under the CABHI grant in 2015-2018 Kansas transitioned to the Evidenced Based Practice of Housing First, and are no longer using the EBP toolkit for its Supported Housing program. A statewide plan is currently being developed for implementation of fidelity reviews using a state-specific Housing First Fidelity Tool created in partnership with the Housing First model creator Dr. Sam Tsemberis, the National Pathways to Housing Team, and CABHI grant team through Kansas University.
16	All clients above age 18 are classified as SMI, resulting in the count of therapeutic foster cases for the 18-20 group to be greater than the number of SED clients in that age range.
16B	Due to the recent implementation of statewide 988 service and the introduction of mobile crisis care teams, the State of Kansas is in the process of standardizing policy and procedures for reporting crisis care services for children and adults from service providers. Representatives from the Department for Children and Families, the Kansas Department for Aging and Disability Services' behavioral health, crisis care, and program evaluation will work to establish a process to submit table 16B with the 2023 URS submission.

URS Table Number	General Notes
20A	The decrease in total percent readmitted within 30 days is the result of COVID-19 decreasing the number of beds and the number of individuals being housed per room. The decrease in the number of beds resulted in individuals being discharged into the community. Once discharged, COVID-19 played a significant role in the amount of time on the wait list and having the staff and environment to get readmitted. The increase in wait time and a smaller number of beds decreased the total percent readmitted within 30 days.
20B	The increase in total percent readmitted within 180 days is because of the increase in wait time and a smaller number of beds available due to COVID-19. Individuals discharged and being readmitted again increased due to the amount of time to reenter a hospital because of the impacts of COVID-19 mentioned above increasing readmission time.

## **Errata Sheet to the 2022 URS Output Tables**

This page includes clarifications and corrections to the 2022 URS Output Tables.

### **ACCESS DOMAIN: Adults with SMI and Children with SED Receiving Crisis Response Services, FY 2022**

The table counts and percentages have been updated due to a processing error.

### **OUTCOMES DOMAIN: Consumer Survey Results, FY 2022**

The percentages have been updated in Response Rate for “Children: U.S.” and “Adults: U.S. Average” due to a processing error.
