#### **2022** Uniform Reporting Summary Output Tables Executive Summary

State Mental Health Agencies (SMHAs) compile and report annual data as part of their application package for SAMHSA's Community Mental Health Block Grant. These compiled data constitute the Uniform Reporting System (URS).

The URS is comprised of 21 tables that are developed by SAMHSA in consultation with SMHAs. The 2022 URS Output Tables present findings from 59 states and U.S. territories. Each output table provides summary information on the SMHA clients served in 2022: sociodemographic characteristics of clients served, outcomes of care, use of selected evidence-based practices, client assessment of care, insurance status, living situation, employment status, and readmission to state psychiatric hospitals within 30 and 180 days. Key data highlights are listed below:

- In 2022, 8,180,236 clients received SMHA services from 59 states and U.S. territories. This is a decrease from 8,195,517 SMHA clients in 2021. There were 5,965,872 adults (or 23.1 per 1,000), 2,197,002 children (or 29.9 per 1,000) served. About 17,362 (0.2 percent) clients were missing age data.
- Among SMHA clients, there were 4,394,191 (53.7 percent) females served while there were 3,730,939 (45.6 percent) males served. In 27 states and U.S. territories, more SMHA males were served than females, while in 32 states and U.S. territories, more SMHA females were served.
- The age distribution among SMHA clients was the largest among ages 25-44 with 33.0 percent, followed by ages 45-64 with 22.8 percent, children ages 0-12 with 14.2 percent, and children ages 13-17 with 12.7 percent.
- The highest percentage of SMHA clients that were served was among the White population with 57.9 percent, followed by Black or African Americans with 17.4 percent. SMHA clients served were 15.8 percent Hispanic and 74.5 percent non-Hispanic.

#### Note:

This table uses data from URS Table 2a, Table 2b and from the U.S. Census Bureau. All denominators for penetration rates use the U.S. Census data from 2021.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served.

The penetration rates for 'Other' gender as well as Age, Gender, Race and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

#### State Notes:

Table 2a

Age None

Gender All "unknown" genders in Utah are crosswalked from "non-binary."

Race None

Overall Populated by BHSIS Project Office using UT's 2022 MH-CLD BCI

Table 2b dataset.

Age

Percent of Children served through the SMHA who met the Federal definitions of SED who also have a substance use diagnosis	1.9%	10.5%	3.0%	56

#### Note:

This table uses data from URS Table 12.

How are the number of clients with co-occurring disorders counted and calculated?

Count of people with a reported mental health and substance use diagnosis.

This table uses data from URS Table 9.

U.S. average and median rates only include states which used the recommended Social Connectedness and Functioning questions.

Adult Social Connectedness and Functioning Measures	State	US
Did you use the recommended new Social Connectedness Questions?	Yes	43
Did you use the recommended new Functioning Domain Questions?	Yes	43
Did you collect these as part of your MHSIP Adult Consumer Survey?	Yes	46

Children/Family Social Connectedness and Functioning Measures	State	US
Did you use the recommended new Social Connectedness Questions?	Yes	38
Did you use the recommended new Functioning Domain Questions?	Yes	37
Did you collect these as part of your YSS-F Survey?	Yes	41

#### **General Notes FY 2022**

#### Utah

URS Table Number	General Notes				
4	Consumers employed increased.				
	While the adult population increased 4%, the employed/seeking employment population grew by 9%. This means that the employed pool grew. Yet the "seeking employment" decreased in 2022 vs 2021 by almost 8%. While one provider accounted for a large number of increased employed adults, the data leads us to believe the population served gained more employment because of the reduction of those seeking work but not employed plus more employed individuals.				
	We also assume a change in COVID hiring during FY22 would, particularly for lower paying positions, have greatly increased.				
	While a large change, we do not believe this a data flaw.				
5A	We suspect the COVID emergency order to keep clients on Medicaid played a large factor in the number of Medicaid clients. When looking at the largest provider with this shift, the previous year the clients were "both" funding sources, but in FY22 these clients remained Medicaid only.				
	Utah recently expanded Medicaid. It's possible this expansion, effort, and the emergency order are correlated to increased Medicaid only clients. Providers did see an influx of Medicaid clients.				
6	The State Hospital believes the changes observed are due to small sizes in the year-to-year counts throwing large percentage changes that are not structurally important or programmatically different.				
7	Many of our contracts have been delayed due to change in our leadership at the Department level and all the changes to the contracting process that happened due to new contracting policies and procedures have adversely impacted how we approve (directly impacting spending in FY21). That delayed all the funding that is not directly provided to the Local Authorities, which is distributed through the allocation letters. Once the contracting was figured out, there was a bump/increase in the spending. Spending in FY21 was also impacted by the pandemic. We may also see a change over this next year related to the consolidation of the Departments and how that impacted contracting.				
	Contracting delays and maintaining programs after the CARES Act funds were spent for everything (except ESMI). Local funds are also impacted by newly formed Salt Lake County (largest area in Utah) ACT team formation.				
7A	The decrease was identified due to a combination of factors; 1. a decrease in provider sites (Carbon Co was a provider in FY21, but not FY22) 2. staffing turnover and vacancies resulting in lower billing				
	3. more staff time allocated to CHRP funding (the same teams manage both FEP and CHRP and split their time billed between the two).				
12	The youth precent change of co-occurring MH/SA diagnoses can only be attributed to variation in reporting, not a structural change.				
	The percent change of co-occurring MH/SA diagnosis can only be assumed as a consequence of current times. It will be something we'll continue to watch, but it in no way seems odd to see an increase in substance use.				
12	Looking back through previous years, Utah has always been low in co-occurring. We don't have a sense that clients are being miscalculated and our system does appropriately accept SUD diagnosis in our mental health system.				
	The jump up from 2021 reporting makes sense given increased SUD. One thing, we do not extrapolate our data. We'll continue the conversation with our providers, but immediately, we don't see a concern in the data or reporting figure in the public system. At face value, we are low.				
15	No provider appeared to be submitting a single larger population of jail as living arrangement at admission, so while the percentage is high, we do not think the client count demonstrates a significant change in the system at this time.				

#### **Errata Sheet to the 2022 URS Output Tables**

This page includes clarifications and corrections to the 2022 URS Output Tables.

#### ACCESS DOMAIN: Adults with SMI and Children with SED Receiving Crisis Response Services, FY 2022

The table counts and percentages have been updated due to a processing error.

#### **OUTCOMES DOMAIN: Consumer Survey Results, FY 2022**

The percentages have been updated in Response Rate for "Children: U.S." and "Adults: U.S. Average" due to a processing error.
