# **2022** Uniform Reporting Summary Output Tables Executive Summary

State Mental Health Agencies (SMHAs) compile and report annual data as part of their application package for SAMHSA's Community Mental Health Block Grant. These compiled data constitute the Uniform Reporting System (URS).

The URS is comprised of 21 tables that are developed by SAMHSA in consultation with SMHAs. The 2022 URS Output Tables present findings from 59 states and U.S. territories. Each output table provides summary information on the SMHA clients served in 2022: sociodemographic characteristics of clients served, outcomes of care, use of selected evidence-based practices, client assessment of care, insurance status, living situation, employment status, and readmission to state psychiatric hospitals within 30 and 180 days. Key data highlights are listed below:

- In 2022, 8,180,236 clients received SMHA services from 59 states and U.S. territories. This is a decrease from 8,195,517 SMHA clients in 2021. There were 5,965,872 adults (or 23.1 per 1,000), 2,197,002 children (or 29.9 per 1,000) served. About 17,362 (0.2 percent) clients were missing age data.
- Among SMHA clients, there were 4,394,191 (53.7 percent) females served while there were 3,730,939 (45.6 percent) males served. In 27 states and U.S. territories, more SMHA males were served than females, while in 32 states and U.S. territories, more SMHA females were served.
- The age distribution among SMHA clients was the largest among ages 25-44 with 33.0 percent, followed by ages 45-64 with 22.8 percent, children ages 0-12 with 14.2 percent, and children ages 13-17 with 12.7 percent.
- The highest percentage of SMHA clients that were served was among the White population with 57.9 percent, followed by Black or African Americans with 17.4 percent. SMHA clients served were 15.8 percent Hispanic and 74.5 percent non-Hispanic.

This table uses data from URS Table 2a, Table 2b and from the U.S. Census Bureau. All denominators for penetration rates use the U.S. Census data from 2021.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served.

The penetration rates for 'Other' gender as well as Age, Gender, Race and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

#### **State Notes:**

Table 2a

Race

Race

Overall

Age Ages that are marked "Not Avaiilable" were either excluded or coded as children in prior years. This year, those ages were coded

as "98 - Not Collected" per the MH CLD following Manual 2.9 Guidance.

Gender Data is pulled from the MH CLD following Manual 2.9 Guidance, therefore any "Other" genders fall into the 'Unknown' or "Not Collected" Categories which equal "Not Available" in this table.

The State continued to include New Hampshire Hospital and Designated Receiving Facility (DRF) Client information, but

methodologies improved for deduplication of clients served (decreasing counts ~4,000).

Overall The State improved data methodologies to increase data completeness and reduce potential for client duplication. This is the 2nd

year the State has submitted MH Client Level Data (CLD), therefore data varance is anticipated.

Table 2b

Age None

Gender NH DHHS is working closely with CMHCs to improve Demographics Data where Gender is reported as an Unknown or Not

Collected Category. There are various Quality Improvement projects that are currently on-going with the Phoenix System.

NH DHHS is working closely with CMHCs to improve Demographics Data where Race/Ethnicity is reported as an Unknown or Not Collected Category. There are various Quality Improvement projects that are currently on-going with the Phoenix System.

The State continued to include New Hampshire Hospital and Designated Receiving Facility (DRF) Client information, but

methodologies improved for deduplication of clients served (decreasing counts ~4,000).

#### Note:

This table uses data from URS Tables 5a and 5b.

#### Type of Medicaid Data Reported

Data based on Medicaid Paid Services

#### **State Notes:**

5a Age None5a Gender None

5a Overall It is believed a category was swapped (Medicaid Only and Both Medicaid and Non-Medicaid Categories), This would explain the large discrepancy from last year to this year.

5b Overall The State continued to include New Hampshire Hospital and Designated Receiving Facility (DRF) Client information, but methodologies improved for deduplication of clients

served (decreasing counts ~4,000). See table 5A, note categories swapped.

#### Note:

This table uses data from URS Table 14a, Table 14b and from the U.S. Census Bureau. All denominators use the U.S. Census data from 2021.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served.

The penetration rates for 'Other' gender as well as Age, Gender, Race and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

#### Note:

Consumers employed as a % of those in labor force uses adults employed and unemployed as the denominator.

Consumers employed as a % of known employment status uses the sum of persons employed, unemployed and not in labor force as the denominator.

This table uses data for URS Table 4a.

#### **State Notes:**

The State of New Hampshire improved diagnosis reporting methodlogy to more accurately report the presence of one of the identified Diagnosis Categories above. This is an area of continued quality improvement with the Community Mental Health Centers.

<sup>\*</sup>In Labor Force is the sum of consumers employed and unemployed.

<sup>\*\*</sup>With Known Employment Status is the sum of consumers employed, unemployed and not in labor force.

# General Notes FY 2022

# **New Hampshire**

JRS Table Number	General Notes							
4	The data collection methodology was changed in 2022 to ensure better accuracy of the data. Because this year to year change is unexpected, resubmission of prior URS tables was previously discussed with SAMHSA staff via several telephone conversations and emails. Our analyst committed to SAMSHA to resubmit both the 2021 and 2022 data sets prior to 2023 URS table submissions, but we will not have capacity to make these resubmissions until the second half of this year.							
5A	Because this year to year change is unexpected, resubmission of prior URS tables was previously discussed with SAMHSA staff via several telephone conversations and emails. Our analyst committed to SAMSHA to resubmit both the 2021 and 2022 data sets prior to 2023 URS table submissions, but we will not have capacity to make these resubmissions until the second half of this year.							
6	2021 was a period of time when we had closed the children's services at NHH and we had a contract with Hampstead to accept them. Hampstead Hospital entered into contract with NH DHHS, serving children, and did not have numbers to report at that time. Both NHH and other inpatient settings also had reduced admissions in 2021 due to closed units as a result of COVID.							
	Regarding MHBG Expenditures, one of the major challenges that we saw in spending down funds lies within our state's contracting process. The process requires multiple levels of review at different stages across our Bureau and Department. This process can be cumbersome and lengthy when trying to select a vendor to carry out the efforts outlined in our application. When a contracting challenge or delay in the contacting process presents itself the project timeline sees a delay.  In addition to the contracting process posing a barrier to spending efficiently, New Hampshire has have experienced significant staffing challenges in our Centers and other Agencies that we contract with. This staffing challenge equates to slower spend-down rates by way of not having individuals in positions that were originally budgeted for in the application.							
7	The State does not anticipate the same challenges with spending down the Block Grant funds in 2023 as in 2022. In response to the addition of the supplemental awards, the Block Grant Team has begun the work to establish a more robust and comprehensive monitoring program for Block Grant-funded programs that will allow project managers and the block grant team to identify program and spending challenges or barriers early on in the contract in an effort to mitigate low spending rates. The NH Block Grant Team is working diligently within its own staffing structure to increase capacity to monitor these contracts as they are implementing the programs, with a strong emphasis on spend rates. Utilizing ARPA funding, the Department was able to hire a Program Specialist to assist the State Planner, in planning and implementing these new invoicing and spending tracking efforts.							
8	Regarding MHBG Expenditures, one of the major challenges that we saw in spending down funds lies within our state's contracting process. The process requires multiple levels of review at different stages across our Bureau and Department. This process can be cumbersome and lengthy when trying to select a vendor to carry out the efforts outlined in our application. When a contracting challenge or delay in the contacting process presents itsel the project timeline sees a delay.  In addition to the contracting process posing a barrier to spending efficiently, New Hampshire has experienced significant staffing challenges in our Centers and other Agencies that we contract with. This staffing challenge equates to slower spend-down rates by way of not having individuals in positions that were originally budgeted							
12	for in the Application In 2022, New Hampshire improved its methodology with capturing a client's most recent three mental health diagnoses.							
14A	NH continues to improve its race and ethnicity collection and use of the Client-level Data. For this category, smal numbers are involved that are proportionally impacted more for methodology and submission changes.							
15	In 2022, New Hampshire implemented data quality improvements that increased these numbers.							
16, 17	The Data Team believes that this is driven from starting with the Client-Level Data to determine the right people to include in the table. The Data Team is researching this further and will possibly need to resubmit, but we will not have capacity to make these resubmissions until the second half of this year.							
20A	This table includes all State Hospital and State Designated Receiving Facility Readmissions, and is pulled from the MH CLD SHR and BCI Files. This is the first year the state has reported the data this way and would explain any discrepancies in the percent readmitted rates, discharge counts, and readmission counts. As time permits the Data Team will look at the prior year with the new method.							

URS Table Number	General Notes
20B	This data was not being collected throughout 2022 by Public Health.
	Public Health does collect discharge data from all acute care and specialty hospitals in NH, including NH Hospital, and may have a way to track a patient across hospitals so it may be possible to do table 21 in the future.

# **Errata Sheet to the 2022 URS Output Tables**

This page includes clarifications and corrections to the 2022 URS Output Tables.

# ACCESS DOMAIN: Adults with SMI and Children with SED Receiving Crisis Response Services, FY 2022

The table counts and percentages have been updated due to a processing error.

# **OUTCOMES DOMAIN: Consumer Survey Results, FY 2022**

The percentages have been updated in Response Rate for "Children: U.S." and "Adults: U.S. Average" due to a processing error.
